# Security Incident Reporting

Document ID: IT-005
Owner: Information Technology
Version: 1
Effective date: 2026-01-01
Audience: All employees

## Purpose and scope

Early reporting helps IT limit harm from suspicious activity or lost equipment.

## Policy

Report suspected account compromise, phishing, or a lost device to the security desk within 30 minutes of discovery. Do not investigate a suspicious file yourself.

## Procedure

Call the security desk or use the incident form, then follow its instructions. Include the time, affected system, and what you observed without sending sensitive content in an open channel.

## Responsibilities and follow-up

The security desk creates an incident record and assigns an owner. The employee should preserve relevant messages and avoid deleting evidence until the response team advises them.

## Example

If a device is missing after a train journey, the employee reports the time and asset details within the reporting window. The security desk then directs containment steps.

## Exceptions

If the form is unavailable, call the published emergency number and provide the details verbally.
